

Evidence in Final Defense Presentation

Outline of Presentation

- Introduction
- Related Works
- Problem Statements
- Thesis Objectives
- **Considered sustainability, societal and ethical Facts**
- Methodology
- Components of the System
- Developing the System
- Evaluating the System
- Conclusions
- Q & A

Considered Ethical facts

- ❑ The development of the voice-over-guided system incorporates strong privacy and data security measures to protect the sensitive information of visually-impaired users.
- ❑ Consent of every participant before collecting data was taken in the prescribed format and comfort of the participants were given the first priority.
- ❑ The system was designed indigenously by ourselves.

Considered Sustainability Goals

- ❑ The development of the voice-over-guided system is rooted in promoting inclusivity by providing visually-impaired individuals with equal access to educational resources.
- ❑ By addressing the educational needs of a specific community often overlooked in conventional educational technology, the thesis contributes to social sustainability.
- ❑ By prioritizing resource efficiency, the project minimizes waste and environmental impact, aligning with sustainable development principles.

>

33

Considered Societal Impacts

- ❑ It recognizes the societal responsibility of engineers to address educational disparities and ensures that technology is developed with the intention of bridging gaps and creating a more equitable society.
- ❑ By providing an alternative and accessible method for learning the writing of multilingual alphabets, the thesis recognizes the importance of promoting a safe and healthy learning environment.
- ❑ The multilingual aspect of the voice-over-guided system demonstrates a cultural awareness and sensitivity in the engineering solution.

Self-Assessment on the Research

- ❖ A two-page document as Annex
- ❖ Contents of the document is as follows:
 - ❖ Basic info:
 - ❖ Title of the Research
 - ❖ Name of supervisor
 - ❖ Synopsis of the research
 - ❖ CO–PO Attainment Assessment Questions (CEP, KP and CEA Based)
 - ❖ Supervisors signature and student's signature (after confirming by both)

Spring: CO–PO Attainment Assessment Questions (CEP, KP and CEA Based)

- 1) What real-world problem did you address, what research gap did you identify, and how does your solution contribute to future innovation or advancement in the field?
- 2) How did you analyze the problem requirements, identify constraints, and determine the functional specifications of your proposed solution?
- 3) How did you plan, schedule, allocate resources, and manage risks throughout the project to ensure successful completion?
- 4) What investigation and analysis methods did you use to validate your assumptions, and how did the results influence your solution?
- 5) How did you design, implement, and evaluate your solution to ensure that it satisfies the identified requirements and constraints?

Fall : CO–PO Attainment Assessment Questions (CEP, KP and CEA Based)

1. Which modern engineering or computing tools did you use, why were they selected, and how did they support the development and validation of your project?
2. What are the societal impacts of your project, and how does your solution address the needs and responsibilities of stakeholders?
3. What ethical and professional issues are associated with your project, and how did you address them during the design and implementation process?
4. How does your project consider environmental sustainability, and what measures were taken to minimize negative environmental impacts?
5. What was your role in the team, and how did collaboration among team members contribute to achieving the project objectives?
6. How would you communicate your project's objectives, methodology, results, and significance to both technical and non-technical audiences?
